

Project Initialization and Planning Phase

Date	1 October 2026
Team ID	SWTID-2026-6275
Team Name	Cipher
Team Members	U. Harikrishnan (Leader), N. Manikandan, B. Sri Harani Devi, K. Kesavan
Project Title	Legal Ease: AI-Powered Legal Document Generator
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform legal document preparation using AI, making it faster, cheaper and more accurate. It tackles the high cost, delay and complexity of drafting legal documents, promising easier access to legal services, fewer errors and happier users. Key features include AI-based document generation, a verified clause library and plain-language explanations.

Project Overview	
Objective	To build an AI-powered web application that automatically generates accurate, customised and easy-to-understand legal documents (rental agreements, NDAs, affidavits, contracts, etc.) from simple user inputs, making legal drafting fast, affordable and accessible to everyone.
Scope	The project covers a guided document-request interface, AI-based drafting with a verified clause library, plain-language clause explanations, multi-language support (English/Tamil), document editing and download (PDF/DOCX), and secure user accounts. Legal advice and court filing are outside the scope.
Problem Statement	
Description	Preparing legal documents is expensive, slow and confusing for ordinary people and small businesses. They depend on lawyers or generic internet templates, which leads to high cost, delays, errors and missing clauses.
Impact	Solving this will save time and money, reduce legal mistakes and disputes, improve access to legal services for low-income and rural users, and increase confidence while signing documents.
Proposed Solution	

Approach	Combine a guided question-based form with a Large Language Model and a verified template/clause library. The system collects details from the user, generates a structured draft, validates mandatory clauses, explains it in simple language and lets the user edit and download it.
Key Features	- AI-powered legal document generation from simple user inputs. - Library of ready-to-use templates (rental, NDA, affidavit, employment, loan).

	- Plain-language explanation of every clause; multi-language (English/Tamil) support. - Automatic validation to check mandatory clauses and missing details. - Edit, preview and download as PDF/DOCX; secure login and saved drafts.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Cloud VM / laptop – 4 vCPU (GPU not required; AI model accessed via API)
Memory	RAM specifications	16 GB
Storage	Disk space for data, models, and logs	100 GB SSD (cloud storage for documents & logs)
Software		
Frameworks	Python frameworks	React.js (frontend), FastAPI / Python (backend)
Libraries	Additional libraries	Jinja2, python-docx, ReportLab, SQLAlchemy, Tailwind CSS, Axios, PyJWT
Development Environment	IDE	VS Code, Postman, Git & GitHub
Data		
Data	Source, size, format	Public legal templates & clause library (50+ templates, JSON/DOCX); user inputs stored in PostgreSQL
