

## Project Executable Files

|                      |                                                |
|----------------------|------------------------------------------------|
| <b>Date</b>          | 2 October 2026                                 |
| <b>Team ID</b>       | SWTID-2026-6275                                |
| <b>Project Name</b>  | LegalEase: AI-Powered Legal Document Generator |
| <b>Maximum Marks</b> | 3 Marks                                        |

### Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

#### Step 1: Submission Checklist

| S.No | Item to Submit                                                  | Submitted (Yes / No / NA) |
|------|-----------------------------------------------------------------|---------------------------|
| 1    | Complete source code (all files and folders)                    | Yes                       |
| 2    | README / Setup Guide (instructions to run the project)          | Yes                       |
| 3    | requirements.txt / package.json / dependency file               | Yes                       |
| 4    | Database schema / seed files (if applicable)                    | NA (no database used)     |
| 5    | Environment configuration file (.env.example or similar)        | Yes                       |
| 6    | Deployed application URL (if hosted)                            | Yes (Ngrok URL)           |
| 7    | APK / Executable binary (if applicable for mobile/desktop apps) | NA                        |
| 8    | Dockerfile / Containerization config (if applicable)            | NA                        |
| 9    | Test files and test results                                     | Yes                       |
| 10   | Demo video or walkthrough (if required)                         | Yes                       |

## Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

legalease-ai/
|-- app.py           - Flask app: routes /, /generate, /download
|-- run_public.py    - Starts Flask + Ngrok tunnel (public URL)
|-- requirements.txt - Python dependencies
|-- .env.example     - Template for GROQ_API_KEY (copy to .env)
|-- .gitignore       - Ignores .env, venv/, __pycache__/
|-- README.md        - Setup and run guide
|-- templates/
|   |-- index.html   - Single-page UI (form + result panel)
|   |-- static/
|       |-- css/style.css - Styling and responsive layout
|       |-- js/main.js   - Fetch API calls, rendering, copy/download
|-- tests/
|   |-- test_app.py    - Unit tests (validation, JSON parsing)
|   |-- test_results.txt - Saved pytest output
|-- docs/
|   |-- Project_Documentation.docx
|   |-- Project_Executable_Files.docx
  
```

## Step 3: Deployment / Access Details

| Field                              | Details                                                                                                                                                                                                                                                                              |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hosted / Deployed URL</b>       | <a href="https://xxxx-xx-xx-xxx-xx.ngrok-free.app">https://xxxx-xx-xx-xxx-xx.ngrok-free.app</a><br>(Public Ngrok URL printed by run_public.py; it changes on every restart, so paste the live URL here before submitting)                                                            |
| <b>Login Credentials (Demo)</b>    | Not required. LegalEase has no login, so the evaluator can open the URL directly.                                                                                                                                                                                                    |
| <b>Platform / Hosting Provider</b> | Local Flask server exposed publicly through an Ngrok tunnel (Groq API for AI inference)                                                                                                                                                                                              |
| <b>Repository Link</b>             | <a href="https://github.com/&lt;team-cipher&gt;/legalease-ai">https://github.com/&lt;team-cipher&gt;/legalease-ai</a><br>( <a href="https://github.com/hariselvi1813-stack/LegalEase-AI-Powered-Document">https://github.com/hariselvi1813-stack/LegalEase-AI-Powered-Document</a> ) |
| <b>Demo Video Link</b>             | <a href="https://drive.google.com/file/d/1bjR29hVyshibdXit--pQAINqWaGXrjkg/view?usp=drivesdk">https://drive.google.com/file/d/1bjR29hVyshibdXit--pQAINqWaGXrjkg/view?usp=drivesdk</a>                                                                                                |

## Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

```
1. Install Python 3.8+ and Git. Clone the repository and open the folder:
  git clone https://github.com/<team-cipher>/legalease-ai.git
  cd legalease-ai
2. Create and activate a virtual environment:
  python -m venv myenv
  myenv\Scripts\activate           (Linux/Mac: source myenv/bin/activate)
3. Install dependencies:
  pip install -r requirements.txt
4. Copy .env.example to .env and add your Groq API key:
  GROQ_API_KEY=your_groq_api_key_here
  NGROK_AUTHTOKEN=your_ngrok_authtoken (only for public URL)
5. Start the app locally:
  python app.py
  Open http://127.0.0.1:5050 in a browser.
6. (Optional) Make it public with Ngrok. Add NGROK_AUTHTOKEN=... to .env, then:
  python run_public.py
  Open the https://....ngrok-free.app URL printed in the terminal.
7. Run the tests:
  pytest tests/
```

## Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                                                                                                       | Workaround / Status                                                                                                 |
|------|--------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 1    | Generated documents are AI drafts and may miss clauses required by local law. They are not a substitute for a licensed lawyer. | A disclaimer is shown on every output. Users should have the draft reviewed by a legal professional before signing. |
| 2    | The public Ngrok URL changes on every restart, and free-tier sessions expire after a few hours.                                | Re-run run_public.py and share the new URL. A reserved domain (paid Ngrok plan) gives a fixed URL.                  |
| 3    | Groq free-tier rate limits can return a temporary error when many requests arrive together or the document is very long.       | Wait a few seconds and click Generate again. Input is capped at 3000 characters to keep responses fast.             |
