

Scalability & Future Plan

Date	3 October 2024
Team ID	SWTID-2026-6275 (Team Cipher)
Project Name	Legal Ease: AI-Powered Legal Document Generator
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Depends on an external AI API with usage limits and cost	Slower responses or failures when many users generate documents at once	High
2	Limited number of document templates and legal categories	Users with other legal needs cannot use the system fully	Medium
3	Generated drafts are not reviewed by a legal professional	Output may miss local legal details; users must verify before use	High

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Single server handling a small number of users	Cloud hosting with load balancing and auto-scaling to support thousands of users
2	Data Storage	Basic database storing user data and documents	Managed cloud database with regular backups and cloud storage for generated files
3	Performance	Each request calls the AI model directly	Add caching, request queues and optimised prompts to reduce response time and cost
4	Security	Basic login and password protection	Add encryption of stored documents, role-based access, two-factor login and audit logs

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Add more document types (sale deed, will, loan agreement, legal notice)	Month 1 to 2	Covers more user needs
Phase 2	Regional language support and voice input	Month 3 to 4	Reaches non-English users
Phase 3	Clause risk check and lawyer review option	Month 5 to 6	Improves accuracy and trust
Phase 4	Mobile app, e-signature and cloud deployment at scale	Month 7 to 9	Wider access and complete workflow
